

LUQMAN AZRI BIN AZMAN

Kota Tinggi, Johor | 018-9889845 | luqmanazri0305@gmail.com

PROFESSIONAL SUMMARY

Recent Computer Science graduate (Intelligence Computing) with hands-on experience in software engineering, web development, and machine learning. Proficient in Python, C#, .NET, React.js, and Android Studio. Proven track record delivering production-level applications during a 6-month software engineering internship.

TECHNICAL SKILLS

Languages: JavaScript, Python, C#, R Programming, HTML, CSS

Frameworks & Libraries: .NET, ASP.NET, React.js, Tailwind CSS, AJAX, Telerik

Databases & Cloud: MySQL, Firebase

Tools & Platforms: Visual Studio, Android Studio, Antigravity, Tableau, Microsoft Office

WORK EXPERIENCE

Software Engineer Intern | Venture GES Manufacturing Services

March 2024 – October 2024

- Developed and debugged C#-based LogCraftParser application to process PCB data, improving error reporting with detailed logs including line number, model name, station name, and serial number.
- Designed Test Equipment Qualification Web application using ASP.NET, C#, AJAX, Telerik, and MySQL; designed frontend & built backend modules for ICT, FCT, Equipment Validation, and Edit Profile with multi-level approval workflows.
- Built WhatsApp Automation system using Autolt to enable real-time production floor notifications.
- Conducted User Acceptance Testing (UAT) and maintained system documentation.

EDUCATION

Bachelor of Computer Science (Intelligence Computing) | Universiti Sains Malaysia, Pulau Pinang

2021 – 2025

CGPA: 3.26 | Dean's List – Semester 7 (GPA 3.61) & Semester 8 (GPA 3.90)

Malaysian Matriculation Programme (Science) | Johore Matriculation College, Tangkak

2020 – 2021

CGPA: 3.83

PROJECTS

PHIDEP – One-Stop Phishing Detection System (Final Year Project) | Python | Android Studio | Firebase | ML | NLP

- Developed mobile application for elderly users to detect phishing in SMS using machine learning (Decision Trees, BERT) and NLP (TF-IDF) for text analysis and URL feature extraction.
- Designed accessible UI with color-coded alerts and integrated AI chatbot for real-time user guidance.
- Awarded Gold Award at university Final Year Project showcase.

Test Equipment Qualification Website (Intern Project) | C# | ASP.NET | AJAX | Telerik | MySQL

- Built web application for equipment checklist management with multi-level approval workflow supporting review, commenting, and approval of submissions.
- Maintained backend logic for multiple modules ensuring smooth data retrieval, validation, and processing.

LogCraftParser Agent (Intern Project) | .NET | C#

- Analyzed and debugged fail files to identify root causes of data processing errors across multiple machine types.
- Improved system reliability by handling error scenarios including invalid data formats, null references, array bounds, and thread aborts; implemented automated email notifications.

Battle of the Bands – Event Management Website | React.js | Tailwind CSS | Firebase

- Built full-stack event management platform with ticketing, reserved seating, band management, and merchandise e-commerce modules.
- Integrated Firebase authentication with JWT, email verification, and role-based access control (RBAC) to secure user data and admin features.

CERTIFICATIONS

CompTIA Data+ | Credential ID: 04568e977c314319ab8a8cc421af7cf4
